Mingus E2E Playwright Test Prompts — Cursor-Ready

Assessment → Sign-Up → Onboarding → Dashboard · 3 Personas · 5 Assessments Each

> **How to use:** Paste one prompt at a time into Cursor chat. Each prompt is self-contained. Prompts within each persona must be run in order. Complete all prompts for one persona before starting the next. Cursor will write Playwright code into the target `.spec.ts` file specified at the top of each prompt.

SETUP — Run once before starting any persona

Paste this into Cursor first to create the test file structure:

```
Create the following Playwright test file structure if it does not already exist:

  tests/e2e/persona1_maya.spec.ts
  tests/e2e/persona2_marcus.spec.ts
  tests/e2e/persona3_jasmine.spec.ts
  tests/e2e/final_verification.spec.ts

In each file, add the standard Playwright imports and a describe block wrapping all tests for that persona.
Set the base URL to http://localhost:5173 in all files.
Do not write any test steps yet — just the scaffolding.
```

PERSONA 1 — MAYA JOHNSON

Budget Tier · $15/month · Decatur, GA

Profile: 25 years old · Marketing Coordinator · $33,600/year · Renting · 2020 Honda Civic · Single · Credit score 680 · Monthly income $2,800 · Monthly expenses $2,950 · Emergency fund $800

Prompt P1-A — AI Replacement Risk Assessment

```
Write this as a Playwright test appended to tests/e2e/persona1_maya.spec.ts.
The app runs at http://localhost:5173.

You are testing persona Maya Johnson (maya.johnson.test@gmail.com).

Steps:
1. Navigate to http://localhost:5173 (the landing page).
```

2. Find and click the button or card that opens the AI Replacement Risk Assessment. Wait for the assessment modal or page to be visible before proceeding.
3. Fill in the email capture field with: maya.johnson.test@gmail.com
4. Fill in the first name field with: Maya
5. Answer each question using the exact options below. All questions are single-select radio buttons unless noted otherwise — use page.getByRole('radio', { name: '...' }).click() or the closest matching locator.

Q1 "If your employer could automate 50% of your tasks..." → Administrative/scheduling
Q2 "Have you ever been replaced by a process or system?" → Yes, in a minor way
Q3 "If your role didn't exist tomorrow, how long before anyone noticed?" → Within a week or two
Q4 "How often do you proactively learn new tools or skills?" → Sometimes
Q5 "When new technology is introduced, your reaction?" → I adopt it when required
Q6 "Do decision-makers fully understand what you do?" → Somewhat
Q7 "Value in your head vs. documented systems?" → Mostly in my head
Q8 "Has a tool taken over any task in the past year?" → Not yet but I can see it coming
Q9 "Honest reason for not learning AI tools more deeply?" → No time
Q10 "Odds your job exists in its current form in 5 years?" → 50–75%

6. Submit the assessment. Wait for the result modal or result section to become visible (waitForSelector or expect(locator).toBeVisible()).
7. Assert that the result headline contains the text: "Real vulnerabilities worth addressing now"
8. Assert that a score between 38 and 48 is displayed somewhere on the result screen.
9. Click the "Continue to Sign Up" button. Wait for navigation or the sign-up form to appear.

Prompt P1-B — Income Comparison Assessment

Write this as a Playwright test appended to tests/e2e/persona1_maya.spec.ts.
The app runs at http://localhost:5173. Still acting as Maya Johnson.

Steps:
1. Navigate to http://localhost:5173 (the landing page).
2. Find and click the button or card that opens the Income Comparison Assessment. Wait for it to be visible.
3. The email and first name fields should already be pre-filled with maya.johnson.test@gmail.com and Maya. Assert they are pre-filled and do NOT clear or change them.
4. Answer each question using the exact options below. All questions are single-select radio buttons.

Q1 "When did you last research what your role earns elsewhere?" → 1–2 years ago
Q2 "When you last got a raise or offer, did you negotiate?" → No, I accepted without negotiating
Q3 "If a colleague doing the same job earned 30% more, what would you do?" → Feel upset but probably do nothing
Q4 "How often do you benchmark your salary against market data?" → Rarely
Q5 "Single biggest reason you haven't earned more in 2 years?" → Didn't ask for a raise

Q6 "Income growth from proactive moves vs. things that happened?" → Mostly happened to me
Q7 "If your income stayed flat for 5 years, impact on quality of life?" → Serious problem
Q8 "Turned down a higher-paying opportunity to stay?" → Not applicable
Q9 "How well do you understand total comp including benefits/equity?" → Somewhat

5. Submit. Wait for the result to be visible.
6. Assert the headline contains: "You're likely leaving real money on the table"
7. Assert a score between 18 and 26 is displayed.

Prompt P1-C — Cuffing Season Score Assessment

Write this as a Playwright test appended to tests/e2e/persona1_maya.spec.ts.
The app runs at http://localhost:5173. Still acting as Maya Johnson.

Steps:
1. Navigate to http://localhost:5173.
2. Click the button or card that opens the Cuffing Season Score Assessment. Wait for it to be visible.
3. Email and name fields should be pre-filled — assert they contain maya.johnson.test@gmail.com and do not change them.
4. Answer each question with the exact options below.
NOTE: Q2 is a MULTI-SELECT / checkbox question — you must select BOTH options listed.
All other questions are single-select radio buttons.

Q1 "Looking back at your last relationship, what ended it?" → Financial stress
Q2 "If the right person came along tomorrow, what would get in the way?" → SELECT BOTH: "Financial stress" AND "My own emotional state" (these are checkboxes — click each one individually)
Q3 "How aligned are your dating habits with what you want?" → Somewhat misaligned
Q4 "Do you tend to overlook red flags when attracted to someone?" → Sometimes
Q5 "How much does your financial situation affect dating confidence?" → Quite a bit
Q6 "Financial incompatibility as a source of tension in past?" → Yes, it was a major issue
Q7 "What concerns you most about committing to a partner?" → Financial entanglement
Q8 "Dating behavior influenced by what friends are doing?" → Somewhat
Q9 "How honest with new partners about your financial situation?" → Somewhat guarded

5. Submit. Wait for result.
6. Assert headline contains: "Significant barriers are standing between you and the relationship you want"
7. Assert score between 22 and 32 is displayed.

Prompt P1-D — Layoff Risk Assessment

Write this as a Playwright test appended to tests/e2e/persona1_maya.spec.ts.
The app runs at http://localhost:5173. Still acting as Maya Johnson.

Steps:
1. Navigate to http://localhost:5173.
2. Click the Layoff Risk Assessment. Wait for it to be visible.
3. Email and name pre-filled — assert and do not change.
4. All questions are single-select radio buttons except Q5 which is single-select. Answer exactly:

  Q1 "Confident you'd survive a 20% workforce cut?" → Somewhat confident
  Q2 "How replaceable is your institutional knowledge?" → It would take some ramp-up
  Q3 "Has anyone raised concerns about your job security?" → No, I've only received positive signals
  Q4 "Relationship with layoff decision-makers?" → Neutral, they know my name
  Q5 "Concrete steps to reduce layoff risk in past 6 months?" → Updated my resume (select ONLY this one — it is a checkbox group; deselect any others)
  Q6 "How would finances hold up without a paycheck for 3 months?" → I'd struggle significantly
  Q7 "Does leadership communicate clearly during financial pressure?" → It's inconsistent
  Q8 "Has your role been mentioned in restructuring conversations?" → Never that I know of
  Q9 "How long would a job search realistically take?" → 3–6 months

5. Submit. Wait for result.
6. Assert headline contains: "Real risks present — targeted action will matter"
7. Assert score between 35 and 48 is displayed.

Prompt P1-E — Vehicle Financial Health Assessment

Write this as a Playwright test appended to tests/e2e/persona1_maya.spec.ts.
The app runs at http://localhost:5173. Still acting as Maya Johnson.

Steps:
1. Navigate to http://localhost:5173.
2. Click the Vehicle Financial Health Assessment. Wait for it to be visible.
3. Email and name pre-filled — assert and do not change.
4. All questions are single-select radio buttons. Answer exactly:

  Q1 "Did you research total cost of ownership before buying?" → I mainly focused on the monthly payment
  Q2 "If your vehicle needed a $2,000 repair tomorrow?" → Put it on a credit card
  Q3 "Unexpected vehicle repair costs in the past 12 months?" → $500–$1,500
  Q4 "Vehicle expense you most frequently underestimate?" → Unexpected repairs

Q5 "Financial decision, lifestyle decision, or both?" → Mostly financial with some preference
Q6 "Ever stayed in a vehicle too long because repairs seemed cheaper?" → Possibly, I'm not sure
Q7 "If vehicle broke down permanently, impact on earning income?" → It would significantly disrupt my work
Q8 "Do you know your vehicle's market value and equity status?" → I have a general idea
Q9 "What would help you make a better vehicle decision next time?" → More emergency savings going in

5. Submit. Wait for result.
6. Assert headline contains: "You're managing — but one shock could create real stress"
7. Assert score between 22 and 35 is displayed.

Prompt P1-F — Sign-Up and Tier Selection

Write this as a Playwright test appended to tests/e2e/persona1_maya.spec.ts.
The app runs at http://localhost:5173. Still acting as Maya Johnson.

IMPORTANT: The payment card fields are inside a Stripe cross-origin iframe. You MUST use page.frameLocator('iframe[name^="__privateStripeFrame"]') or page.frameLocator('iframe[title*="Secure card"]') to scope your locators before interacting with card fields. Do NOT use page.fill() directly on card inputs.

Steps:
1. From the final assessment result, click "Continue to Sign Up". Wait for the registration form to be visible.
2. Assert the email field is pre-filled with maya.johnson.test@gmail.com. Do NOT change it.
3. Fill in the password field with: SecureTest123!
4. Assert there is NO password confirmation field — only a show/hide toggle. If a confirmation field is present, flag it as FAIL in a test comment.
5. Select the Budget ($15/month) tier card. Assert it becomes highlighted/selected before entering payment.
6. Locate the Stripe iframe using page.frameLocator(). Inside the iframe, fill:
   - Card number: 4242 4242 4242 4242
   - Expiry: 12/28
   - CVV: 123
   - ZIP: 30032
7. Submit the registration form. Wait for navigation to complete (waitForURL or waitForSelector on a dashboard element).
8. Assert:
   a. The URL includes "/dashboard" (or equivalent route — adjust if the actual route differs)
   b. The user was NOT taken to an intermediate page first
   c. No error messages are visible on the page
9. Check the console for a welcome email trigger log (or mock email log). Assert it was fired — look for a log line containing "welcome" or "confirmation" (adjust based on how your app logs this).

Prompt P1-G — Quick Setup / Onboarding Overlay

Write this as a Playwright test appended to tests/e2e/persona1_maya.spec.ts.
The app runs at http://localhost:5173. Maya is now on the dashboard.

Steps:
1. Assert the Quick Setup overlay appears automatically after login. Wait for it to be visible before interacting.
2. Complete the Quick Setup overlay:
   - Income range: $30,000–$50,000
   - Primary financial goal: Build an emergency fund
3. Dismiss or advance the overlay. Wait for it to close.
4. Navigate to the Financial Profile page (/profile or equivalent route).
5. Fill in all profile fields:
   Full name: Maya Johnson
   Phone: (404) 555-0182
   Date of birth: 1999-03-14
   City: Decatur
   State: GA
   ZIP: 30032
   Occupation: Marketing Coordinator
   Employer: Bright Spark Creative Agency
   Annual income: 33600
   Monthly take-home: 2800
   Employment type: Full-time
   Years at current employer: 2.5
6. Navigate to the budget/expenses section and fill in monthly expenses:
   Housing (rent): 1100
   Transportation: 581
   Food/groceries: 320
   Utilities: 95
   Subscriptions: 48
   Student loans: 220
   Credit card minimum: 96
   Personal/misc: 290
7. Fill in savings and debt section:
   Emergency fund balance: 800
   Savings account balance: 0
   Student loan balance: 18400
   Credit card balance: 5800
   Vehicle loan balance: 7020
8. Fill in vehicle details:
   Year/Make/Model: 2020 Honda Civic LX
   Mileage: 41000

Monthly payment: 285
Insurance: 142
Loan balance: 7020

9. Add goals:
   Goal 1: Emergency Fund — Target $8,850 — Timeline 18 months
   Goal 2: Pay off credit card — Target $5,800 — Timeline 24 months
10. Set birthday in profile important dates: 1999-03-14
11. Save all sections. After each save, wait for a success confirmation before proceeding to the next section.
12. Assert the dashboard updates to reflect Maya's data WITHOUT a full page reload (no page.goto() should be needed — the data should appear reactively).

Prompt P1-H — Dashboard Verification (Maya)

Write this as a Playwright test appended to tests/e2e/persona1_maya.spec.ts.
Use expect() assertions for every check below. Each assertion should produce a named PASS or FAIL in the test output — use test.step('description', async () => { ... }) to label each check.

ASSESSMENT RESULTS:
- Assert all 5 assessment score elements are visible or accessible on the dashboard
- Assert AI Risk score element shows a value between 38 and 48
- Assert AI Risk band label contains "Elevated Risk"
- Assert Income Comparison score between 18 and 26, band contains "Significant Gap"
- Assert Cuffing Season score between 22 and 32, band contains "Not Ready"
- Assert Layoff Risk score between 35 and 48, band contains "Vulnerable"
- Assert Vehicle Health score between 22 and 35, band contains "Reactive"
- Assert FRI (Financial Readiness Index) displays a value between 28 and 38

FINANCIAL HEALTH INDICATORS:
- Assert emergency fund displays "$800" and a warning that it covers "0.3 months" (or similar low-coverage text)
- Assert savings rate displays "–5.4%" (or negative value) with alert/warning styling (red color class or aria-label indicating warning)
- Assert debt-to-income ratio displays "13.6%" with a green/acceptable indicator
- Assert housing cost displays "39.3%" with a warning (target <30% messaging)
- Assert transportation cost displays "20.7%" with a warning (target <15% messaging)

BUDGET TIER FEATURE GATES:
- Assert "Basic Reports" tab is visible and clickable (not locked)
- Assert "Income Tracking" tab is visible and clickable (not locked)
- Assert "Advanced Analytics" section is present but locked — assert an upgrade prompt or lock icon is visible
- Assert "Custom Reports" section is present but locked — assert upgrade prompt is visible
- Assert Financial Forecast chart is visible and shows at most 3 months of data; assert months 4–12 are blurred or hidden

with an upgrade prompt

RECOMMENDATIONS PANEL:
- Assert at least one recommendation element contains text referencing "emergency fund" (case-insensitive)
- Assert at least one recommendation contains text referencing "salary" or "benchmark" or "negotiation" (case-insensitive)
- Assert recommendations do NOT contain placeholder text (assert none contain "[" or "TODO" or "placeholder")

DASHBOARD WIDGETS:
- Assert Spending Milestones widget is present and contains no error state
- Assert Special Dates widget shows "March 14" or "03/14" or "1999-03-14" for birthday
- Assert Daily Outlook tab is present and renders without blank/empty state
- Assert Overview tab shows all sections without blank cards (no empty card elements with no child content)

PERFORMANCE:
- Record the time from page.goto('/dashboard') to the dashboard being fully visible. Assert it is under 2000ms.
- Assert there are no console errors by attaching a page.on('console') listener and filtering for type 'error'. Assert the array of errors is empty.
- Set viewport to 375px width: await page.setViewportSize({ width: 375, height: 812 }). Assert the dashboard still renders all sections without horizontal overflow.

Persona 1 Cleanup

Write this as an afterAll hook at the end of tests/e2e/persona1_maya.spec.ts.

After all Persona 1 tests complete:
1. Call page.evaluate(() => { sessionStorage.clear(); localStorage.clear(); }) to clear browser storage.
2. Delete all cookies with context.clearCookies().
3. If the app exposes a test-reset API endpoint (e.g. POST /api/test/reset or DELETE /api/users/test), call it with Maya's email: maya.johnson.test@gmail.com
4. Navigate back to http://localhost:5173 and assert the landing page loads in a clean/logged-out state.
5. Log "Persona 1 cleanup complete" to the console.

PERSONA 2 — MARCUS THOMPSON

Mid-tier · $35/month · Spring, TX

Profile: 28 years old · Software Developer · $75,600/year · Renting with partner · 2021 Toyota Camry SE · In a serious relationship · Credit score 720 · Monthly income $4,200 · Monthly expenses $3,475 · Emergency fund

$3,500

Prompt P2-A — AI Replacement Risk Assessment

Write this as a Playwright test appended to tests/e2e/persona2_marcus.spec.ts.
The app runs at http://localhost:5173.

You are testing persona Marcus Thompson (marcus.thompson.test@gmail.com).

Steps:
1. Navigate to http://localhost:5173.
2. Click the AI Replacement Risk Assessment. Wait for it to be visible.
3. Fill email: marcus.thompson.test@gmail.com
4. Fill first name: Marcus
5. All questions are single-select radio buttons. Answer exactly:

  Q1 "If your employer could automate 50% of your tasks..." → Decision-making
  Q2 "Have you ever been replaced by a process or system?" → No, I don't think so
  Q3 "If your role didn't exist tomorrow, how long before anyone noticed?" → Immediately
  Q4 "How often do you proactively learn new tools or skills?" → Often
  Q5 "When new technology is introduced, your reaction?" → I try to learn it early
  Q6 "Do decision-makers fully understand what you do?" → Mostly
  Q7 "Value in your head vs. documented systems?" → Split roughly evenly
  Q8 "Has a tool taken over any task in the past year?" → Yes, one or two things
  Q9 "Honest reason for not learning AI tools more deeply?" → Already using them actively
  Q10 "Odds your job exists in its current form in 5 years?" → 75–90%

6. Submit. Wait for result.
7. Assert headline contains: "You're well-positioned in the age of AI"
8. Assert score between 70 and 82.

Prompt P2-B — Income Comparison Assessment

Write this as a Playwright test appended to tests/e2e/persona2_marcus.spec.ts.
The app runs at http://localhost:5173. Still acting as Marcus Thompson.

Steps:
1. Navigate to http://localhost:5173. Open the Income Comparison Assessment. Wait for it to be visible.
2. Assert email is pre-filled with marcus.thompson.test@gmail.com. Do not change it.
3. All questions are single-select radio buttons. Answer exactly:

Q1 "When did you last research what your role earns elsewhere?" → Within the last 3 months
Q2 "When you last got a raise or offer, did you negotiate?" → Yes, and I got more than the initial offer
Q3 "If a colleague doing the same job earned 30% more, what would you do?" → Research whether it's true first
Q4 "How often do you benchmark your salary against market data?" → Every few months
Q5 "Single biggest reason you haven't earned more in 2 years?" → I have been earning more
Q6 "Income growth from proactive moves vs. things that happened?" → Mostly my initiative
Q7 "If your income stayed flat for 5 years, impact on quality of life?" → Moderate concern
Q8 "Turned down a higher-paying opportunity to stay?" → No, I've always pursued better pay
Q9 "How well do you understand total comp including benefits/equity?" → Pretty well

4. Submit. Wait for result.
5. Assert headline contains: "You manage your income like an asset"
6. Assert score between 78 and 88.

Prompt P2-C — Cuffing Season Score Assessment

Write this as a Playwright test appended to tests/e2e/persona2_marcus.spec.ts.
The app runs at http://localhost:5173. Still acting as Marcus Thompson.

Steps:
1. Navigate to http://localhost:5173. Open the Cuffing Season Score Assessment. Wait for it to be visible.
2. Assert email is pre-filled. Do not change it.
3. All questions are single-select radio buttons. Answer exactly:

Q1 "Looking back at your last relationship, what ended it?" → I'm currently in a relationship
Q2 "If the right person came along tomorrow, what would get in the way?" → Nothing — I'm ready
Q3 "How aligned are your dating habits with what you want?" → Completely aligned
Q4 "Do you tend to overlook red flags when attracted to someone?" → Rarely
Q5 "How much does your financial situation affect dating confidence?" → Not at all
Q6 "Financial incompatibility as a source of tension in past?" → No, not at all
Q7 "What concerns you most about committing to a partner?" → Nothing — I'm ready to commit
Q8 "Dating behavior influenced by what friends are doing?" → Barely at all
Q9 "How honest with new partners about your financial situation?" → Completely open

4. Submit. Wait for result.
5. Assert headline contains: "You're ready — and you know what you want"
6. Assert score between 88 and 100.

Prompt P2-D — Layoff Risk Assessment

Write this as a Playwright test appended to tests/e2e/persona2_marcus.spec.ts.
The app runs at http://localhost:5173. Still acting as Marcus Thompson.

Steps:
1. Navigate to http://localhost:5173. Open the Layoff Risk Assessment. Wait for it to be visible.
2. Assert email is pre-filled. Do not change it.
3. Q5 is a MULTI-SELECT / checkbox group — select BOTH listed options. All others are single-select radio buttons.

Q1 "Confident you'd survive a 20% workforce cut?" → Fairly confident
Q2 "How replaceable is your institutional knowledge?" → I'd be hard to replace in the short term
Q3 "Has anyone raised concerns about your job security?" → No, I've only received positive signals
Q4 "Relationship with layoff decision-makers?" → Good, they know who I am
Q5 "Concrete steps to reduce layoff risk in past 6 months?" → SELECT BOTH checkboxes: "Expanded my professional network" AND "Learned a new in-demand skill"
Q6 "How would finances hold up without a paycheck for 3 months?" → I'd manage but it would be tight
Q7 "Does leadership communicate clearly during financial pressure?" → Generally yes
Q8 "Has your role been mentioned in restructuring conversations?" → Never that I know of
Q9 "How long would a job search realistically take?" → 1–3 months

4. Submit. Wait for result.
5. Assert headline contains: "Good security with a few addressable gaps"
6. Assert score between 68 and 80.

Prompt P2-E — Vehicle Financial Health Assessment

Write this as a Playwright test appended to tests/e2e/persona2_marcus.spec.ts.
The app runs at http://localhost:5173. Still acting as Marcus Thompson.

Steps:
1. Navigate to http://localhost:5173. Open the Vehicle Financial Health Assessment. Wait for it to be visible.
2. Assert email is pre-filled. Do not change it.
3. All questions are single-select radio buttons. Answer exactly:

Q1 "Did you research total cost of ownership before buying?" → Yes, but only partially
Q2 "If your vehicle needed a $2,000 repair tomorrow?" → Pay cash from savings
Q3 "Unexpected vehicle repair costs in the past 12 months?" → Under $500
Q4 "Vehicle expense you most frequently underestimate?" → Depreciation
Q5 "Financial decision, lifestyle decision, or both?" → An equal mix of both
Q6 "Ever stayed in a vehicle too long because repairs seemed cheaper?" → No, I've always made good calls

Q7 "If vehicle broke down permanently, impact on earning income?" → Moderate disruption
Q8 "Do you know your vehicle's market value and equity status?" → Yes, I know both and I'm in good shape
Q9 "What would help you make a better vehicle decision next time?" → I'm already making good decisions

4. Submit. Wait for result.
5. Assert headline contains: "Solid awareness with real room to optimize"
6. Assert score between 62 and 74.

Prompt P2-F — Sign-Up and Tier Selection

Write this as a Playwright test appended to tests/e2e/persona2_marcus.spec.ts.
The app runs at http://localhost:5173. Still acting as Marcus Thompson.

IMPORTANT: Card fields are inside a Stripe cross-origin iframe. Use
page.frameLocator('iframe[name^="__privateStripeFrame"]') or page.frameLocator('iframe[title*="Secure card"]')
to scope all card field interactions. Do NOT use page.fill() directly on card inputs.

Steps:
1. From the final assessment result, click "Continue to Sign Up". Wait for the registration form.
2. Assert email is pre-filled with marcus.thompson.test@gmail.com. Do not change it.
3. Fill password: DevSecure456!
4. Select the Mid-tier ($35/month) tier card. Assert it becomes highlighted before entering payment.
5. Inside the Stripe iframe, fill:
   - Card number: 4242 4242 4242 4242
   - Expiry: 12/28
   - CVV: 123
   - ZIP: 77379
6. Submit. Wait for navigation to dashboard.
7. Assert:
   a. URL includes "/dashboard"
   b. No error messages are visible
   c. Advanced Analytics feature is visible and NOT locked (assert no lock icon or upgrade prompt on Advanced Analytics)
   d. Custom Reports section is accessible (not locked)
   e. API Access is available (not locked)

Prompt P2-G — Quick Setup / Onboarding (Marcus)

Write this as a Playwright test appended to tests/e2e/persona2_marcus.spec.ts.
The app runs at http://localhost:5173. Marcus is now on the dashboard.

Steps:

1. Assert the Quick Setup overlay appears automatically. Wait for it.
2. Complete Quick Setup:
   - Income range: $75,000–$100,000
   - Primary financial goal: Invest and build wealth
3. Dismiss overlay. Navigate to the Financial Profile page.
4. Fill all profile fields:
   Full name: Marcus Thompson
   Phone: (832) 555-0247
   Date of birth: 1996-11-22
   City: Spring
   State: TX
   ZIP: 77379
   Occupation: Software Developer
   Employer: NovaTech Solutions
   Annual income: 75600
   Monthly take-home: 4200
   Employment type: Full-time
   Years at current employer: 3
5. Fill monthly expenses:
   Housing (rent — split with partner): 700
   Transportation: 811
   Food/groceries: 480
   Utilities: 110
   Subscriptions: 64
   Gym membership: 45
   Personal/misc: 265
   Savings (automated transfer): 1016
6. Fill savings and debt:
   Emergency fund balance: 3500
   Investment account (Roth IRA): 8200
   401k balance: 11400
   Student loan balance: 22000
   Vehicle loan balance: 14800
   Credit card balance: 0
7. Fill vehicle details:
   Year/Make/Model: 2021 Toyota Camry SE
   Mileage: 28500
   Monthly payment: 389
   Insurance: 178
   Loan balance: 14800
8. Add goals:
   Goal 1: Emergency Fund — Target $10,425 — Timeline 6 months

Goal 2: Max Roth IRA ($7,000 this year) — Timeline 8 months
Goal 3: Pay off student loans — Target $22,000 — Timeline 60 months

9. Fill Relationship / Wellness data (mid-tier feature):
   Relationship status: In a serious relationship
   Partner financial planning: enable joint budgeting
   Wellness: 4x/week gym, 10-min daily meditation
   Stress level: 5/10
10. Set important dates:
   Birthday: 1996-11-22
   Partner birthday (custom event): 1997-07-08 — Estimated cost: $150
11. Save all sections. Wait for success confirmation after each save.

Prompt P2-H — Dashboard Verification (Marcus)

Write this as a Playwright test appended to tests/e2e/persona2_marcus.spec.ts.
Use test.step() to label each check. All assertions use expect().

ASSESSMENT RESULTS:
- Assert AI Risk score between 70 and 82, band contains "Low Risk"
- Assert Income Comparison score between 78 and 88, band contains "Income Optimized"
- Assert Cuffing Season score between 88 and 100, band contains "Fully Ready"
- Assert Layoff Risk score between 68 and 80, band contains "Reasonably Stable"
- Assert Vehicle Health score between 62 and 74, band contains "Aware but Optimizable"
- Assert FRI displays between 55 and 68 (note: Cuffing Season is excluded from FRI per spec — verify this in the FRI tooltip or label)

FINANCIAL HEALTH INDICATORS:
- Assert emergency fund shows $3,500 and a warning that it covers approximately 1.0 months (target 3)
- Assert savings rate shows 24.2% with a positive/green indicator
- Assert debt-to-income ratio shows 11.5% in green
- Assert net worth shows a negative value around –$24,080 with a visible trend indicator
- Assert transportation cost flag is present showing approximately 19.3% of income with a warning

MID-TIER FEATURE ACCESS:
- Assert Advanced Analytics tab is fully accessible (not locked, no lock icon)
- Assert Custom Reports section is accessible
- Assert API Access is available
- Assert Relationship Spending Patterns widget is visible
- Assert Couples Financial Planning tool is accessible
- Assert Stress vs. Investment Behavior widget is visible
- Assert Financial Forecast shows all 12 months with no blur or lock

- Assert Professional-tier features (fleet management, white-label) ARE locked with an upgrade prompt

RECOMMENDATIONS PANEL:
- Assert at least one recommendation references building emergency fund to $10,425
- Assert at least one recommendation references Roth IRA contribution
- Assert a relationship financial planning recommendation is present

SPECIAL DATES WIDGET:
- Assert Marcus's birthday "November 22" or "11/22" appears with a countdown
- Assert partner birthday "July 8" or "07/08" appears as a custom event with $150 cost

PERFORMANCE:
- Assert dashboard loads within 2000ms
- Assert no console errors
- Assert all mid-tier data endpoints return status 200 (intercept with page.route() or check network tab via page.on('response'))

Persona 2 Cleanup

Write this as an afterAll hook at the end of tests/e2e/persona2_marcus.spec.ts.

After all Persona 2 tests complete:
1. Call page.evaluate(() => { sessionStorage.clear(); localStorage.clear(); })
2. Call context.clearCookies()
3. If the app exposes a test-reset endpoint, call it with: marcus.thompson.test@gmail.com
4. Navigate to http://localhost:5173 and assert the landing page loads in a clean/logged-out state.
5. Log "Persona 2 cleanup complete" to console.

PERSONA 3 — DR. JASMINE WILLIAMS

Professional Tier · $100/month · Alexandria, VA

Profile: 38 years old · Senior Policy Analyst · $104,000 personal income · Combined household $184,000 · Homeowner · Lexus NX 350 + Honda Pilot · Married with children · Credit score 780 · Monthly income $5,200 · Monthly expenses $7,855 · Emergency fund $15,000

Prompt P3-A — AI Replacement Risk Assessment

Write this as a Playwright test appended to tests/e2e/persona3_jasmine.spec.ts.
The app runs at http://localhost:5173.

You are testing persona Dr. Jasmine Williams (jasmine.williams.test@gmail.com).

Steps:
1. Navigate to http://localhost:5173.
2. Click the AI Replacement Risk Assessment. Wait for it to be visible.
3. Fill email: jasmine.williams.test@gmail.com
4. Fill first name: Jasmine
5. All questions are single-select radio buttons. Answer exactly:

Q1 "If your employer could automate 50% of your tasks..." → Decision-making
Q2 "Have you ever been replaced by a process or system?" → No, I don't think so
Q3 "If your role didn't exist tomorrow, how long before anyone noticed?" → Within a few days
Q4 "How often do you proactively learn new tools or skills?" → Rarely
Q5 "When new technology is introduced, your reaction?" → I adopt it when required
Q6 "Do decision-makers fully understand what you do?" → Yes, completely
Q7 "Value in your head vs. documented systems?" → Mostly in my head
Q8 "Has a tool taken over any task in the past year?" → Not that I'm aware of
Q9 "Honest reason for not learning AI tools more deeply?" → Don't see the relevance
Q10 "Odds your job exists in its current form in 5 years?" → Greater than 90%

6. Submit. Wait for result.
7. Assert headline contains: "You have a moat, but it needs reinforcing"
8. Assert score between 52 and 64.

Prompt P3-B — Income Comparison Assessment

Write this as a Playwright test appended to tests/e2e/persona3_jasmine.spec.ts.
The app runs at http://localhost:5173. Still acting as Dr. Jasmine Williams.

Steps:
1. Navigate to http://localhost:5173. Open the Income Comparison Assessment. Wait for it to be visible.
2. Assert email is pre-filled with jasmine.williams.test@gmail.com. Do not change it.
3. All questions are single-select radio buttons. Answer exactly:

Q1 "When did you last research what your role earns elsewhere?" → 6–12 months ago
Q2 "When you last got a raise or offer, did you negotiate?" → Yes, and I got more than the initial offer
Q3 "If a colleague doing the same job earned 30% more, what would you do?" → Ask my manager immediately
Q4 "How often do you benchmark your salary against market data?" → Once a year

Q5 "Single biggest reason you haven't earned more in 2 years?" → Limited opportunities at my company
Q6 "Income growth from proactive moves vs. things that happened?" → Roughly equal
Q7 "If your income stayed flat for 5 years, impact on quality of life?" → Serious problem
Q8 "Turned down a higher-paying opportunity to stay?" → Yes, once
Q9 "How well do you understand total comp including benefits/equity?" → Completely

4. Submit. Wait for result.
5. Assert headline contains: "Good instincts. A few optimizations could make a real difference"
6. Assert score between 65 and 76.

Prompt P3-C — Cuffing Season Score Assessment

Write this as a Playwright test appended to tests/e2e/persona3_jasmine.spec.ts.
The app runs at http://localhost:5173. Still acting as Dr. Jasmine Williams.

Steps:
1. Navigate to http://localhost:5173. Open the Cuffing Season Score Assessment. Wait for it to be visible.
2. Assert email is pre-filled. Do not change it.
3. All questions are single-select radio buttons. Answer exactly:

Q1 "Looking back at your last relationship, what ended it?" → I'm currently in a relationship
Q2 "If the right person came along tomorrow, what would get in the way?" → Nothing — I'm ready
Q3 "How aligned are your dating habits with what you want?" → Completely aligned
Q4 "Do you tend to overlook red flags when attracted to someone?" → Never
Q5 "How much does your financial situation affect dating confidence?" → Slightly
Q6 "Financial incompatibility as a source of tension in past?" → No, not at all
Q7 "What concerns you most about committing to a partner?" → Nothing — I'm ready to commit
Q8 "Dating behavior influenced by what friends are doing?" → Barely at all
Q9 "How honest with new partners about your financial situation?" → Completely open

4. Submit. Wait for result.
5. Assert headline contains: "You're ready — and you know what you want"
6. Assert score between 90 and 100.
7. Assert the recommendation copy reflects a married/established context (look for text containing "married" or "partner" or "established relationship" — not "finding" or "looking for" a partner).

Prompt P3-D — Layoff Risk Assessment

Write this as a Playwright test appended to tests/e2e/persona3_jasmine.spec.ts.

The app runs at http://localhost:5173. Still acting as Dr. Jasmine Williams.

Steps:
1. Navigate to http://localhost:5173. Open the Layoff Risk Assessment. Wait for it to be visible.
2. Assert email is pre-filled. Do not change it.
3. Q5 is a MULTI-SELECT / checkbox group — select BOTH listed options. All others are single-select radio buttons.

Q1 "Confident you'd survive a 20% workforce cut?" → Very confident
Q2 "How replaceable is your institutional knowledge?" → Irreplaceable in my current context
Q3 "Has anyone raised concerns about your job security?" → No, I've only received positive signals
Q4 "Relationship with layoff decision-makers?" → Strong, I'm well-known and valued
Q5 "Concrete steps to reduce layoff risk in past 6 months?" → SELECT BOTH checkboxes: "Built visibility with leadership" AND "Had a direct conversation with my manager"
Q6 "How would finances hold up without a paycheck for 3 months?" → I'd manage but it would be tight
Q7 "Does leadership communicate clearly during financial pressure?" → Yes, very transparently
Q8 "Has your role been mentioned in restructuring conversations?" → Never that I know of
Q9 "How long would a job search realistically take?" → 1–3 months

4. Submit. Wait for result.
5. Assert headline contains: "Strong job security and financial resilience"
6. Assert score between 82 and 94.

Prompt P3-E — Vehicle Financial Health Assessment

Write this as a Playwright test appended to tests/e2e/persona3_jasmine.spec.ts.
The app runs at http://localhost:5173. Still acting as Dr. Jasmine Williams.
Answer based on her PRIMARY vehicle (Lexus NX 350).

Steps:
1. Navigate to http://localhost:5173. Open the Vehicle Financial Health Assessment. Wait for it to be visible.
2. Assert email is pre-filled. Do not change it.
3. All questions are single-select radio buttons. Answer exactly:

Q1 "Did you research total cost of ownership before buying?" → Yes, thoroughly
Q2 "If your vehicle needed a $2,000 repair tomorrow?" → Pay cash from savings
Q3 "Unexpected vehicle repair costs in the past 12 months?" → Under $500
Q4 "Vehicle expense you most frequently underestimate?" → I account for all of them
Q5 "Financial decision, lifestyle decision, or both?" → Mostly financial with some preference
Q6 "Ever stayed in a vehicle too long because repairs seemed cheaper?" → No, I've always made good calls
Q7 "If vehicle broke down permanently, impact on earning income?" → Minimal impact
Q8 "Do you know your vehicle's market value and equity status?" → Yes, I know both and I'm in good shape

Q9 "What would help you make a better vehicle decision next time?" → I'm already making good decisions

4. Submit. Wait for result.
5. Assert headline contains: "Your vehicle is a managed cost center, not a financial stress source"
6. Assert score between 78 and 90.

Prompt P3-F — Sign-Up and Tier Selection

Write this as a Playwright test appended to tests/e2e/persona3_jasmine.spec.ts.
The app runs at http://localhost:5173. Still acting as Dr. Jasmine Williams.

IMPORTANT: Card fields are inside a Stripe cross-origin iframe. Use
page.frameLocator('iframe[name^="__privateStripeFrame"]') or page.frameLocator('iframe[title*="Secure card"]')
to scope all card field interactions. Do NOT use page.fill() directly on card inputs.

Steps:
1. From the final assessment result, click "Continue to Sign Up". Wait for the registration form.
2. Assert email is pre-filled with jasmine.williams.test@gmail.com. Do not change it.
3. Fill password: Professional789!
4. Select the Professional ($100/month) tier card. Assert it becomes highlighted before entering payment.
5. Inside the Stripe iframe, fill:
   - Card number: 4242 4242 4242 4242
   - Expiry: 12/28
   - CVV: 123
   - ZIP: 22301
6. Submit. Wait for navigation to dashboard.
7. Assert all of the following Professional-tier features are UNLOCKED immediately after registration (no lock icon, no upgrade prompt on any of these):
   - Team Collaboration
   - White-label Options
   - Dedicated Manager access
   - Custom Integrations
   - Export functionality (CSV, Excel, PDF, JSON)
   - Fleet Management (CRITICAL: she has 2 vehicles — this must be available)
   - Tax Optimization Analysis
8. Assert URL includes "/dashboard" and no error messages are visible.

Prompt P3-G — Quick Setup / Onboarding (Dr. Williams)

Write this as a Playwright test appended to tests/e2e/persona3_jasmine.spec.ts.
The app runs at http://localhost:5173. Dr. Williams is now on the dashboard.

Steps:
1. Assert the Quick Setup overlay appears automatically. Wait for it.
2. Complete Quick Setup:
   - Income range: Over $100,000
   - Primary financial goal: Reduce debt and optimize expenses
3. Dismiss overlay. Navigate to the Financial Profile page.
4. Fill all profile fields:
   Full name: Jasmine Williams
   Phone: (703) 555-0319
   Date of birth: 1986-08-05
   City: Alexandria
   State: VA
   ZIP: 22301
   Occupation: Senior Policy Analyst
   Employer: U.S. Department of Health and Human Services
   Annual income (personal): 104000
   Monthly take-home (personal): 5200
   Spouse/partner income: 80000
   Combined household income: 184000
   Employment type: Full-time (Federal Government)
   Years at current employer: 8
5. Fill monthly household expenses:
   Mortgage (PITI): 4200
   Transportation Lexus (payment + insurance): 520
   Transportation Pilot (insurance + gas): 300
   Childcare: 1500
   Food/groceries: 680
   Utilities: 220
   Healthcare: 300
   Education/activities: 120
   Subscriptions: 85
   Personal/misc: 430
6. Fill savings and debt:
   Emergency fund: 15000
   Joint savings: 22000
   Retirement (TSP/401k): 98000
   Home equity: 87000 (home value 485000, mortgage balance 398000)
   Vehicle 1 (Lexus) loan balance: 28400

Vehicle 2 (Pilot) loan balance: 0 (paid off)
Student loans: 44200
Credit card balance: 0

7. Fill Fleet Management — 2 vehicles (PROFESSIONAL TIER FEATURE):
   Vehicle 1: 2023 Lexus NX 350 — Mileage 14200 — Payment $380/mo — Insurance $140/mo — Loan balance $28400
   Vehicle 2: 2019 Honda Pilot — Mileage 52000 — Paid off — Insurance $175/mo — Gas $125/mo
8. Add goals:
   Goal 1: Reduce student loan — Target $44,200 — Strategy: income-driven — Timeline 36 months
   Goal 2: Build emergency fund — Target $23,565 — Timeline 18 months
   Goal 3: Home refinancing analysis — run within 30 days
9. Fill Professional Features — Additional Data:
   Business use of vehicle (Lexus): 15% business use — enable tax optimization
   Team members to invite: 0 (skip this step)
10. Fill Family / Parenting data:
    Number of children: 1
    Childcare monthly: 1500
    Child healthcare monthly: 300
    Child education/activities: 120
11. Fill Wellness data:
    Exercise: 2–3x/week home gym + stroller walks
    Meditation: 20 min daily
    Stress level: 6/10
    Work-life balance score: 4/10
12. Set important dates:
    Birthday: 1986-08-05
    Spouse birthday (custom): 1984-12-19 — Estimated cost: $200
    Annual home inspection (custom): next occurrence — Estimated cost: $450
    Child school year start (custom): 2026-09-02 — Estimated cost: $800
13. Save all sections. Wait for success confirmation after each save.

Prompt P3-H — Dashboard Verification (Dr. Williams)

Write this as a Playwright test appended to tests/e2e/persona3_jasmine.spec.ts.
Use test.step() for every check. All checks use expect().

ASSESSMENT RESULTS:
- Assert AI Risk score between 52 and 64, band contains "Moderate Risk"
- Assert Income Comparison score between 65 and 76, band contains "Active but Incomplete"
- Assert Cuffing Season score between 90 and 100, band contains "Fully Ready"
- Assert Layoff Risk score between 82 and 94, band contains "Well Protected"
- Assert Vehicle Health score between 78 and 90, band contains "Financially Sound"

- Assert FRI displays between 70 and 80 (Cuffing Season excluded — verify FRI label says it excludes relationship score)
- CRITICAL: Assert BOTH the FRI (~83) AND the Financial Health Score (25/100) are visible on the dashboard with DISTINCT labels — they must not both be labeled "Score"
- Assert a tooltip, callout, or explanatory text is present near both scores explaining the difference between behavioral readiness (FRI) and current financial state (Health Score)

FINANCIAL HEALTH — CRITICAL ALERTS:
- Assert debt-to-income ratio (excl. mortgage) shows approximately 72.5% with a RED/URGENT alert indicator
- Assert housing cost shows approximately 80.8% of personal income with an alert; assert a combined household figure of approximately 54.6% is also shown
- Assert savings rate shows approximately –42.5% with a RED/URGENT alert
- Assert emergency fund shows $15,000 / approximately 1.9 months with an AMBER/warning indicator
- Assert net worth shows approximately –$343,220 with a trend indicator visible
- Assert a banner or prominent callout is present noting the contrast between strong financial behaviors (FRI) and current financial state (debt load) — flag absence as a UX gap

PROFESSIONAL TIER FEATURES:
- Assert Export button is visible and clickable (assert it has CSV and PDF options)
- Assert Fleet Management section shows BOTH vehicles (Lexus and Honda Pilot) with separate cost cards for each
- Assert Tax Optimization panel is present and shows an estimated business deduction for Lexus (approximately $11,887 potential annual)
- Assert Executive Summary dashboard tab is accessible
- Assert Compliance Monitoring section is present
- Assert all mid-tier features are also accessible
- Assert Financial Forecast shows all 12 months with no blur or lock

PARENTING & WELLNESS:
- Assert Parenting Cost Analysis widget shows approximately $1,920/month total child costs
- Assert Work-Life Balance Financial Impact widget shows balance score of 4/10 with "Needs Improvement" or equivalent status
- Assert Wellness Investment for Families widget is present with a Family ROI calculation

RECOMMENDATIONS PANEL:
- Assert an URGENT recommendation referencing debt-to-income ratio is present
- Assert an URGENT recommendation referencing housing cost reduction or income increase is present
- Assert a student loan strategy recommendation is present (income-driven repayment)
- Assert a refinancing opportunity recommendation is present (referencing credit score 780)
- Assert an AI upskilling recommendation is present (despite low layoff risk, moderate AI risk score flags adaptation gap)
- Assert emergency fund completion recommendation references $23,565 target

SPECIAL DATES WIDGET:
- Assert Dr. Williams's birthday "August 5" or "08/05" appears with a countdown
- Assert spouse birthday "December 19" or "12/19" appears with $200 cost
- Assert home inspection event appears with $450 cost

- Assert child school year start "September 2, 2026" or "09/02/2026" appears with $800 cost
- Assert events are sorted ascending by date (soonest first)

PERFORMANCE:
- Assert dashboard loads within 2000ms despite larger data payload
- Assert fleet management API endpoints return status 200
- Assert export functions produce downloadable files without error (trigger a CSV export and assert the download starts)
- Assert no console errors
- Set viewport to 375px: await page.setViewportSize({ width: 375, height: 812 }). Assert all sections are readable, fleet section scrolls correctly without overflow, and export button is not hidden off-screen.

Persona 3 Cleanup

Write this as an afterAll hook at the end of tests/e2e/persona3_jasmine.spec.ts.

After all Persona 3 tests complete:
1. Call page.evaluate(() => { sessionStorage.clear(); localStorage.clear(); })
2. Call context.clearCookies()
3. If the app exposes a test-reset endpoint, call it with: jasmine.williams.test@gmail.com
4. Navigate to http://localhost:5173 and assert the landing page loads in a clean/logged-out state.
5. Log "Persona 3 cleanup complete" to console.

FINAL — Cross-Persona & System Verification

Prompt FINAL-A — Cross-Persona Data Isolation Test

Write this as a Playwright test in tests/e2e/final_verification.spec.ts.

Log in sequentially as each persona and verify complete data isolation.
Credentials:
  Maya: maya.johnson.test@gmail.com / SecureTest123!
  Marcus: marcus.thompson.test@gmail.com / DevSecure456!
  Jasmine: jasmine.williams.test@gmail.com / Professional789!

For each persona login, use a test.step() block labeled with the persona name. Within each block:

1. Navigate to the login page and sign in with the persona's credentials. Wait for the dashboard to load.
2. Assert assessment scores match expected values:
   - Maya: AI Risk 38–48, Income 18–26, Cuffing 22–32, Layoff 35–48, Vehicle 22–35
   - Marcus: AI Risk 70–82, Income 78–88, Cuffing 88–100, Layoff 68–80, Vehicle 62–74
   - Jasmine: AI Risk 52–64, Income 65–76, Cuffing 90–100, Layoff 82–94, Vehicle 78–90
3. Assert the financial profile displays ONLY that persona's data:
   - Maya: income $33,600, city Decatur GA
   - Marcus: income $75,600, city Spring TX
   - Jasmine: income $104,000, city Alexandria VA

   Also assert that NO data from either of the other two personas appears anywhere on the dashboard.
4. Assert tier features match their plan:
   - Maya (Budget): Advanced Analytics is LOCKED
   - Marcus (Mid): Advanced Analytics is UNLOCKED, Fleet Management is LOCKED
   - Jasmine (Professional): Fleet Management is UNLOCKED
5. Assert FRI scores are in expected ranges:
   - Maya: 28–38
   - Marcus: 55–68
   - Jasmine: 70–80
6. Assert all visible recommendation text is persona-specific (none contain "[" or "TODO" or "placeholder")
7. After asserting, log out. Assert the session is fully cleared before proceeding to the next persona login (assert the login page is shown and no persona name or email is visible in the page).

If data from one persona appears in another's account, fail the test immediately with a descriptive message identifying which data leaked.

Prompt FINAL-B — Scoring Regression Check

NOTE TO CURSOR: This test is a UNIT TEST, not a browser test. Do NOT write this as a Playwright spec.
Write this as a Jest or Vitest unit test in: tests/unit/scoring.test.ts

The test should import the scoring engine functions directly and assert the following question-level point values and totals for each persona. If any individual question score or total deviates by more than ±3 points from expected, the test should fail with a message identifying which question is wrong.

MAYA JOHNSON — Expected scoring:

AI Risk: Q1=3, Q2=5, Q3=8, Q4=6, Q5=6, Q6=5, Q7=2, Q8=5, Q9=3, Q10=3 → Total ~46
Income: Q1=7, Q2=3, Q3=0, Q4=3, Q5=0, Q6=3, Q7=6, Q8=4, Q9=2 → Total ~28
Cuffing: Q1=7, Q2=5, Q3=4, Q4=6, Q5=3, Q6=3, Q7=4, Q8=4, Q9=2 → Total ~38
Layoff Risk: Q1=8, Q2=4, Q3=15, Q4=5, Q5=2.4,Q6=3, Q7=4, Q8=7, Q9=3 → Total ~52
Vehicle: Q1=0, Q2=7, Q3=7, Q4=5, Q5=9, Q6=7, Q7=2, Q8=5, Q9=5 → Total ~47

FRI: (46×0.25)+(28×0.30)+(52×0.25)+(47×0.20) → Expected ~43

MARCUS THOMPSON — Expected scoring:
AI Risk: Q1=15, Q2=15, Q3=15, Q4=9, Q5=9, Q6=8, Q7=6, Q8=2, Q9=5, Q10=4 → Total ~88
Income: Q1=15, Q2=15, Q3=12, Q4=9, Q5=12, Q6=9, Q7=4, Q8=5, Q9=3 → Total ~84
Cuffing: Q1=15, Q2=15, Q3=15, Q4=3, Q5=12, Q6=11, Q7=10, Q8=8, Q9=7 → Total ~96
Layoff Risk: Q1=12, Q2=8, Q3=15, Q4=9, Q5=4.8,Q6=7, Q7=6, Q8=7, Q9=4 → Total ~73
Vehicle: Q1=11, Q2=15, Q3=12, Q4=8, Q5=6, Q6=11, Q7=8, Q8=8, Q9=7 → Total ~86
FRI: (88×0.25)+(84×0.30)+(73×0.25)+(86×0.20) → Expected ~82

DR. JASMINE WILLIAMS — Expected scoring:
AI Risk: Q1=15, Q2=15, Q3=12, Q4=3, Q5=6, Q6=11, Q7=4, Q8=8, Q9=1, Q10=5 → Total ~80
Income: Q1=11, Q2=15, Q3=15, Q4=6, Q5=8, Q6=6, Q7=6, Q8=2, Q9=4 → Total ~73
Cuffing: Q1=15, Q2=15, Q3=15, Q4=0, Q5=9, Q6=11, Q7=10, Q8=8, Q9=7 → Total ~90
Layoff Risk: Q1=15, Q2=15, Q3=15, Q4=12, Q5=4.8,Q6=7, Q7=8, Q8=7, Q9=4 → Total ~88
Vehicle: Q1=15, Q2=15, Q3=12, Q4=12, Q5=9, Q6=11, Q7=8, Q8=8, Q9=7 → Total ~97
FRI: (80×0.25)+(73×0.30)+(88×0.25)+(97×0.20) → Expected ~83

Prompt FINAL-C — FRI Contrast Display Test (Dr. Williams)

Write this as a Playwright test appended to tests/e2e/final_verification.spec.ts.

Log in as Dr. Jasmine Williams: jasmine.williams.test@gmail.com / Professional789!
Navigate to the dashboard Overview tab.

Using test.step() for each check:

1. Assert the Financial Readiness Index (FRI) metric is visible on the page and displays a value between 70 and 83.
   The label must clearly read "Financial Readiness Index" or "FRI" — not just "Score".

2. Assert the Financial Health Score is visible on the page and displays a value of approximately 25 out of 100.
   The label must clearly read "Financial Health Score" or "Health Score" — not just "Score".
   These two metrics MUST have distinct labels. If both say "Score", mark this as FAIL and log a UX gap.

3. Assert that a tooltip, callout box, or explanatory text block is present near these two scores.
   The text should convey that FRI measures financial behaviors/readiness while Health Score measures current financial state.
   Assert the explanation text contains at least one of: "behaviors", "habits", "readiness", "how you manage".
   Assert the explanation text contains at least one of: "current state", "debt", "where you stand", "outcomes".

4. Assert the explanation does NOT frame these two scores as contradictory — look for language indicating they are

complementary dimensions. If the explanation is absent entirely, fail the test and log:
"UX GAP: FRI vs Health Score explanation missing — required before launch. Suggested copy:
Your Readiness Index shows strong financial habits and decision-making.
Your Health Score shows the current weight of your debt load.
The path forward is applying those habits to reduce the debt — and the Health Score will follow."

Prompt FINAL-D — Mobile Responsive Spot Check (All 3 Personas)

Write this as a Playwright test appended to tests/e2e/final_verification.spec.ts.

At the START of each persona's block below, set the viewport:
```
  await page.setViewportSize({ width: 375, height: 812 });
```
Keep this viewport for the entire persona block. Use test.step() for each check.

--- MAYA JOHNSON (Budget) ---
Log in as: maya.johnson.test@gmail.com / SecureTest123!

1. Assert landing page assessment buttons have a minimum height of 44px (use page.evaluate to check computed height)
2. Open the AI Replacement Risk Assessment modal. Assert no horizontal scroll (scrollWidth <= clientWidth). Assert all answer options are visible without being cut off.
3. Navigate to the registration form. Assert all form fields stack vertically and are visible without horizontal scroll.
4. Navigate to the dashboard. Assert the header and tab bar are fully visible without horizontal scroll.
5. Assert at least 3 dashboard widgets are visible above the fold (within first 812px of page height).
6. Assert the recommendations panel text is readable (font-size >= 12px, no overflow hidden cutting text).
7. Assert locked feature sections show a clear upgrade prompt (assert lock icon or "Upgrade" text is present and visible — not broken/blank UI).

--- MARCUS THOMPSON (Mid-tier) ---
Reset viewport: `await page.setViewportSize({ width: 375, height: 812 });`
Log in as: marcus.thompson.test@gmail.com / DevSecure456!

1–6. Repeat checks 1–6 from Maya's block.
7. Assert the Relationship Spending widget renders fully at 375px — no overflow, no blank state.
8. Assert the Financial Forecast 12-month view either scrolls horizontally cleanly OR collapses to a summary card. Assert it does not overflow the viewport with hidden content.

--- DR. JASMINE WILLIAMS (Professional) ---
Reset viewport: `await page.setViewportSize({ width: 375, height: 812 });`
Log in as: jasmine.williams.test@gmail.com / Professional789!

1–6. Repeat checks 1–6 from Maya's block.

7. Assert the Fleet Management section with 2 vehicles stacks vertically — Vehicle 1 card above Vehicle 2 card — without horizontal overflow.
8. Assert the Export button is visible and not hidden off-screen (use getBoundingClientRect and assert x >= 0 and x <= 375).
9. Assert the Parenting Cost Analysis widget renders without text truncation (assert the widget container's scrollHeight equals its offsetHeight, or is scrollable — not just hidden).

Prompt FINAL-E — Generate Test Results Summary

Write this as a Playwright test appended to tests/e2e/final_verification.spec.ts.

This is the final prompt. After all persona and system tests have run, use the test results
gathered across the full suite to generate a summary report file.

Steps:
1. Collect all test results from the Playwright test run (pass/fail counts per persona, per section).
2. Read the current version from package.json using fs.readFileSync.
3. Write a markdown file to: tests/e2e/persona_test_results_[TODAY'S DATE IN YYYY-MM-DD FORMAT].md

The file must follow this exact structure:

```
---
# Mingus End-to-End Persona Test Results
**Date:** [today's date]
**Build version:** [pulled from package.json]
**Tester:** Cursor automated Playwright test run

## Summary
| Persona          | Assessments | Sign-Up | Onboarding | Dashboard    | Data Isolation | Pass Rate |
|-------------------|-------------|---------|------------|--------------|----------------|-----------|
| Maya Johnson      | [X/5]       | [P/F]   | [P/F]      | [X/Y checks] | [P/F]          | [%]       |
| Marcus Thompson   | [X/5]       | [P/F]   | [P/F]      | [X/Y checks] | [P/F]          | [%]       |
| Dr. J. Williams   | [X/5]       | [P/F]   | [P/F]      | [X/Y checks] | [P/F]          | [%]       |

## Assessment Score Validation
[Fill in actual vs. expected scores for all 15 assessment runs — 5 per persona]

## Failed Checks
[List any items that returned FAIL with a description of what was wrong and a recommended fix]

## UX Gaps Identified
```

[List any issues discovered that are not critical failures but should be addressed before launch.
REQUIRED ENTRY: FRI vs. Financial Health Score labeling — see FINAL-C]

Performance Results
[List actual load times vs. 2000ms target for all three personas]

Recommendation
[Choose one and provide rationale:]
APPROVED FOR LAUNCH
ISSUES REQUIRE ATTENTION
BLOCKED
---

4. Assert the file was written successfully by checking fs.existsSync on the output path.
5. Log the full file path to console: "Test results saved to: tests/e2e/persona_test_results_[date].md"

Total prompts: 24 persona prompts + 5 system verification prompts = 29 total Unit test: 1 additional (tests/unit/scoring.test.ts — separate from Playwright) Estimated Playwright run time: 3–5 hours for a complete automated pass Run in staging environment only — not production
